

# ONE HOME

## SMART HOME SOLUTION

**ONE Home** is the smart home solution developed by VNPT Technology, makes your home safer and keeps you connected. The advanced technologies ensure system performance, privacy, power saving and bring convenience to users. With an open and flexible design, the solution is compatible with a wide range of smart devices and provides a customization capability to meet customer's specific requirements. Especially, service providers can actively build service packages to adapt market demand.

---

### PRODUCT HIGHLIGHTS

- Connect sensors (smoke, gas, PIR, etc.), lighting systems, smart devices, voice assistants and more to control your home with your smartphone, tablet or voice
- Easy to set up and control using mobile app with user friendly interface, even when you are not at home
- Let your devices manage themselves by creating rules, scenarios and schedules right from your mobile phone
- Allow to proactively select sensors and devices to keep up with demand, independent with device vendors, while ensure quality of services

## TYPICAL DEPLOYMENT MODELS

ONE Home system can be deployed easily in existing houses or brandnew ones without having to re-arrange electric lines or their infrastructures.

## FEATURES

## Security

- ## Security
- Real-time monitoring and 24/7 protecting your home
  - Deliver good video quality even in low light
  - 2 – ways audio
  - Motion detection, open/close door detection and alarm assistant
  - Recording schedule on demand
  - Facial recognition: Identify stranger and send alert notification
  - Intrusion detection, line-crossing detection and loitering detection
  - Object detection: Detect idle/removed objects within a configurable time span

- Support multi alert channels: SMS, Call, Mobile app, etc...

## Safety

- Detect and alert unsafe behaviors: baby crying detection, fall detection, etc...
- Detect fire/explosion risks, gas leak and automatically alert
- Monitor environment parameters to calculate and give control commands to other devices or give recommendations to help maintain the best environment

## Automation Control

- Control all devices with only a few touches on a smart-phone or tablet
- Create rules, scenarios to allow your devices automatically work as you want
- Control devices directly through your voice
- Support autonomous operation mode in case of internet connection loss

## Devices

- Home Center Controller: connect and manage all devices
  - Analyze data/ events from sensors/ devices, calculate and execute the automated scenarios without depend on internet connection
  - Home Center Controller comes in different models for flexible deployment
- Connect sensors and devices on demand, independent of device vendors
  - Safety and security system: includes indoor/outdoor IP camera, Door sensor, PIR sensor, Smoke sensor and Gas sensor to protect your life 24/7
  - Lighting system and smart devices: includes smart switch, smart plug and IR Blaster, connect to Home Center Controller, ensure the system works normally in case of

internet connection loss

- Environment control system:  
Temperature sensor, Humidity  
sensor, etc... connect and send data

to Home Center Controller to  
analyze, calculate, give alerts and  
send control commands to other  
devices (fans, dehumidifiers, etc...)
